# 8th Workshop on Challenges in Performance Methods for Software Development: WOSP-C'23 Chairs' Welcome

It is our great pleasure to welcome you to the 8th *Workshop on Challenges in Performance Methods for Software Development – WOSP-C 2023*. This year's workshop continues its tradition of being the forum for the discussion of emerging or unaddressed challenges in software and performance, including challenges in developing software to be performant, concurrent programming issues, performance and architecture, performance measurement, cloud performance, and testing. Its purpose is to open new avenues for research on methods to address continuously emerging performance challenges. The software world is changing, and new challenges are to be expected.

We also encourage attendees to attend the keynote and talk presentations. These valuable and insightful talks can and will guide us to a better understanding of the future:

- Non-Volatile Hardware Transactional Memory: Advancements, Challenges, and Future Directions, Paolo Romano (who is currently at IST, Lisbon University & INESC-ID)

Putting together *WOSP-C'23* was a team effort. We first thank the authors for providing the content of the program. We are grateful to the program committee, who worked very hard in reviewing papers and providing feedback for authors. Finally, we thank the hosting organization or university, our sponsor, ACM SIGs.

We hope that you will find this program interesting and thought-provoking and that the workshop will provide you with a valuable opportunity to share ideas with other researchers and practitioners from institutions around the world.
